Week 3, CSCW Summer 2018

On Blogging

- Going really well!
- TLDR examples
- Title examples
- Novel style example
- Remember to add categories and post on time
- Note: I use likes to signify “I read this” — I use 5 stars to indicate I really like it... but rather spotty!

Week 3 – How to Science, plus Containing the CSCW Beast

[mlruss]

CSCW Theories (or more precisely a lack thereof)

[jongrandfield]

TL; DR

In this blog post I wrote thoughts about the articles while I perused them. Jaden Smith and the developers of Halo also make an appearance. [spencervatrtwatts]

TLDR: Two weeks into my first co-op I was given a task on choosing the proper tool for updating remote systems and I wish I had read these papers before having to make that decision. I talk about how points from the three papers could have made my experience a lot easier. [nharmswo]

Conversation Hook: What dimensions do you think could probably be removed, or which one do you think adds the most? Or do you think there should be an 8th that people are underestimating but your experience suggests is more important?

[kevinmitchellcscwuvic]

Having fun with your style of posts, check out [karina]
(No I don't have Johansen's framework on my wall but I do have one I sketched on a napkin a long time ago!)

Discussions on Slack

- Project ideas
- Workshop ideas

What is work anyway, leisure matters! <https://www.seriousleisure.net/concepts.html>
[mlruss]

Thoughts on project possibilities

- Build a collaborative bot
- Evaluate a bot (have slides to post, next week)
- Evaluate or study some existing collaborative system
- Other ideas?
- Recall work in groups of 4 (longer break today to allow some mingling, project pitch ideas on Slack and perhaps in class if time)
- **Visitor from last week: Prof. Dennis Hore (professor at Uvic on biophysical chemistry and materials science, with an interest in laboratory automation and data analysis!) See me at break!**

Next week....

- Several readings on “Techniques” and another blog post is due
- Guest presenters: Carly Lebeuf (bot expert) and Alexey Zagalsky (knowledge work expert)

Any concerns?

See me! Today during the break or make an appointment....

Coming up...schedule changes

- June 7th — project proposals are due!
- June 14th — workshop on Digital humanities (and attend part of a summer school!)
- June 21st — lecture on communities and knowledge communities
- Three more workshops, one on software dev, the other two? Education and??? You can help choose!

Today

- 3 papers on evaluation/framework (your posts as discussion points)
- Break(s) – discuss project ideas (have stickies), start forming groups
